Limited	Pulp Fill Kit Endodontic cement - PULP FILL KIT is an endodontic cement, used as intra canal filling material. The liquid and the powder provide one viscous and consistent mixture, which is used as gutta-percha point. The setting of this cement is caused by the reaction between the Zinc Oxide and Eugenol, which in the presence of water produces the zinc eugenolate. The resin improves the characteristics of the mixture and delays the setting time. The radiopacity is optimized by the bismuth and barium salts. The formulation of PULP FILL KIT is similar to the one developed by GROSSMAN.
